### **MACK TECHNOLOGIES RECEIVES MEDICAL DEVICE QUALITY CERTIFICATION**

**WESTFORD, MA, OCTOBER 31, 2007** – Mack Technologies, Inc., is pleased to announce that the quality management system at their Westford, Massachusetts, facility has been independently audited and certified to be in compliance with the requirements of the ISO 13485:2003 international quality standard for medical device manufacturing.

The International Organization for Standardization (ISO), a prestigious network of national standards institutes from 157 countries, created the standard to provide medical device quality management system requirements. In order to achieve certification, companies must demonstrate quality management systems that have the ability to provide medical device manufacturing that meet customer and regulatory requirements specific to the strict nuances of medical devices. The scope of the quality management system includes production, assembly and repair of electronic systems. TUV Rheinland, an accredited registrar, carried out the third-party assessment and certification.

“Mack Technologies has been manufacturing medical devices for many years, and achieving ISO 13485:2003 certification assures our existing and future medical customers that our quality management system is capable of reliably and repeatedly manufacturing medical devices” said John Kovach, President of Mack Technologies. “Achieving this certification represents another milestone in our quality roadmap and further progress on our growth goals in the medical device contract manufacturing market. This accomplishment also validates our investment in our Shop Floor System (SFDM) to provide a controlled and disciplined manufacturing environment. I would like to thank the dedicated personnel in our quality, engineering, and manufacturing organizations for their achievement of such a distinguished recognition.”

### **ABOUT MACK TECHNOLOGIES**

Mack Technologies, Inc. – a wholly owned subsidiary of Mack Group – is a leading provider of complex contract manufacturing services including printed circuit board assembly, electromechanical assembly, and full system assembly. Headquartered in Westford, Massachusetts, Mack Technologies operates three manufacturing facilities throughout North America, including Florida and Mexico.
